

# Cable Management

Tempus Systems LTD provides a wide range of IT product and services. Our acquired knowledge and experience enables us to provide data centres and infrastructures within many industry sectors, ranging from large factories to shops and offices.

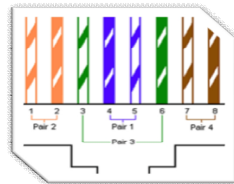

We offer a professional consultancy service to ensure that we understand the needs of the end user and combine this with a complete site survey so that we can provide the best working solution. We pride ourselves on our proficient and professional installation technique that eliminates the possibility of accidental damage to cable or equipment.

Typical Network Switch connected with a Router, Network Printer, Server Farm and Multiple Computers (some connected via network hubs)

## Our 5 Point Policy of Installation:

- Substantiate what is required by the client in relation to the business
- Offer unbiased advice and recommendations with regards to cabling and equipment
- Provide a detailed offer itemizing all work and pricing
- Install agreed plan to current standards
- Provide full warranty and documentation

Structured Cabling is the core element of the corporate network and it is imperative that every business has an infrastructure that will meet all requirements for today and in the future.

Investing in a cabling infrastructure facilitates a cost effective and efficient business that will easily accommodate any computer network, telephone system, CCTV or any other IP based equipment.
